Preferred Stack

Languages: Go, Python, JavaScript, C/C++, Solidity

Databases: MySQL, PostgreSQL, MongoDB, Redis, HBase, Cassandra

Software: Django, React, PyTorch, Web3

DevOps: AWS, Terraform, Linux, Docker, Ansible

Work Experience

Teague Enterprises

New York, NY

Owner

June 2015 - Present

- Rendered software development and management services to various companies.
- Performed risk and quality assessment of intellectual property for software company acquisitions.
- Provided feedback to management in a potential reorganization of a startup by interviewing employees.
- Developed revenue generating language learning product using React, Django, and NLTK.

OnFrontiers

New York, NY

CTO & AI Lead

June 2023 - September 2025

- Hired as AI Lead to define and execute the company's strategy for applying LLMs and AI agents across internal workflows and customer-facing products.
- Owned technology and product direction for Access, OnFrontiers' flagship product, modernizing a legacy, bug-prone application across the frontend, backend, infrastructure, and development workflow.
- Returned as CTO, overseeing company-wide technology strategy and Harness, the company's \$10M+ enterprise product, while working directly with enterprise customers to shape product direction, technical integrations, and implementation strategy.
- Led engineering for a team of 10 people, owning architecture, infrastructure, security, hiring, delivery, and technical strategy across the company's core SaaS products.
- Architected a plan to unify Access and Harness, reducing infrastructure duplication, technical complexity, and ongoing operating costs.
- Built the company's first production AI agents, automating the matching of customer projects with relevant subject-matter experts.
- Restructured engineering and product organizations, reducing annual operating costs by approximately \$2M.
- Led AWS infrastructure and software-vendor optimization efforts, generating an additional \$200K in annual savings.
- Led technical and organizational work required to achieve SOC 2 and GDPR compliance.

Fiat Labs

New York, NY

CEO & Founder

June 2018 - February 2021

- Accepted into the prestigious Techstars NYC accelerator for summer of 2018.
- Wrote a Layer 1 blockchain with algorithmic central bank based on Tendermint and Ethereum (Web3, Go, Solidity, C/C++).
- Contributed C++ code to Hera, Ethereum's new virtual machine based on Web Assembly (eWASM).
- Responsible for strategy, hiring, marketing, fundraising and backend development.

Loom Network

New York, NY

Lead Blockchain Developer

January 2018 - May 2018

- Architected and implemented the Loom SDK for application-specific sidechains on top of Tendermint (Go, JavaScript).
- Implemented Delegated Proof of Stake (DPoS) algorithm in Go.
- Wrote blockchain implementation of Delegatecall.com including transaction handling, inflation model, and token rewards (Solidity, JavaScript, Vue).
- Implemented transfer hub for transferring assets between mainnet and sidechain (Go, Web3, Solidity).
- Audited and wrote Solidity smart contract for an ERC20 token with inflation.
- Loom token reached \$300MM market capitalization after product launch.

OnFrontiers

New York, NY

CTO & Co-Founder

September 2016 - June 2018

- Responsible for all technical efforts including hiring, software architecture, DevOps, and project management.
- Fully involved in company direction, strategy, marketing, sales, hiring and fundraising.
- Led the transition from a Ruby on Rails MVP to full production platform in Go and React.
- Architected and implemented most of the initial platform including backend, frontend, and deployment.
- Sourced and hired software engineers and QA.
- Managed team using agile methods with Scrum and Kanban.
- Implemented CI deployment pipeline with Jenkins, Docker, and Ansible on AWS.
- Company leveraged new software platform to reach \$1MM+ revenue and raise \$2MM in funding.

SonicCloud

New York, NY

Independent Consultant

January 2016 - August 2016

- Successfully project managed the transition from a demo application to a full MVP for investors.
- Assisted in hiring candidates and vetting software development vendors.
- Collaborated with CEO on go-to-market strategy.
- Architected and implemented the DevOps infrastructure using Ansible, Docker, and Google Cloud.
- Wrote Go code for a VoIP REST API.
- Assisted in creating a complex VoIP architecture including FreeSWITCH, Faust, Gstreamer, Kazoo, and Go microservices.

Techstars

New York, NY

Mentor in Residence

February 2014 - July 2016

- Selected to mentor early stage startups in Engineering and Data Science at the #2 accelerator in the world.
- Provide feedback to managing director on accelerator applicants.

Thomson Reuters

New York, NY

Independent Consultant

July 2013 - July 2015

- Lead developer on Nitro, a hybrid SIP/XMPP server written in Go that powers the 2nd largest financial messenger in the world.
- Helped to scale backend to support 120,000 concurrent connections.
- Developed testing architecture to simulate complex network scenarios.

Engrossd

CEO & Founder

New York, NY

July 2013 - December 2013

- Founded startup that focuses on organization and discovery of research papers.
- Responsible for all aspects of the business including marketing, fund raising, product development, and programming.
- Wrote backend in Django + Python and frontend in JavaScript + Backbone.js.

GetGlue

VP of Engineering and Data Science

New York, NY

May 2011 - June 2013

- Venture backed up startup (USQ Ventures, Time Warner, RRE) that raised \$24MM and exited in 2013.
- Managed a group of 14 talented engineers and oversaw the hiring of many of them.
- Responsible for day to day operations, technical decisions, performance reviews, hiring, and agile project management.
- Scaled backend to support 4 million users and 10,000+ requests per second.
- Wrote several backend services in Python including activity feeds and recommendations.
- Performed statistical analysis of user data in R and Python to support business development efforts.

Northrop Grumman

Intelligence Systems Division, Signal Processing Engineer

McLean, VA

January 2010 - April 2011

- Wrote algorithm in C++/OpenMP that Finished 24 out of over 2000 teams in Track 1 of the Yahoo! KDD Cup.
- Researched and implemented machine learning algorithms in C++ and Java (FDA, SVMs, Decision Trees, LSI, etc) for use in face recognition, cyber security, and collaborative filtering applications.
- Implemented Hadoop MapReduce inverted indexing, secondary sorting, and index compression (Group VarInt and Rice Codes) algorithms in Java. Ran algorithms on a cluster of 500 EC2 nodes.
- Aided in MapReduce implementation of the Stochastic Gradient Boosted Decision Trees machine learning algorithm.
- Wrote custom input/output format classes, record readers, key partitioners, and path filters for Hadoop.
- Tuned Hadoop memory and garbage collection parameters to increase job performance.
- Saved company 17% on Amazon EC2 Elastic MapReduce jobs by writing a custom Hadoop cluster deployment system in Python.

Georgia Tech Research Institute

Telecommunications Lab, Co-op Student

Atlanta, GA

September 2006 - May 2009

- Emphasis was on RF analysis of OFDM, PSK, FSK, and QAM signals.
- Wrote real-time digital signal processing algorithms in C++ utilizing the X-Midas toolkit for use in software-defined radio and signal analysis applications.
- Performed RF data captures and signal measurements such as SNR, Band Power, and EVM.
- Wrote LCD interface and Differential Manchester Codec in VHDL for Xilinx Spartan FPGAs and Xilinx CoolRunner CPLDs.
- Developed microcontroller firmware in C and assembly and multithreaded networking applications in Java and C#.

Georgia Institute of Technology

Atlanta, GA

Computational Combustion Lab, HPC Administrator

March 2006 - August 2006

- Maintained physical HPC server clusters using Rocks on Red Hat Linux, including one with over 200 nodes.
- Assisted postdoctoral researchers run combustion simulations with MPI.

Publications & Talks

Schutt, R. and O'Neil, C. *Doing Data Science*. O'Reilly, Sebastopol, 2013, 135-138.

Panelist for Facebook Platform Partners. *Facebook Mobile Developer Conference*, (New York, NY, 2013).

Kong, J., Teague, K., and Kessler, J. The Love-Hate Square Counting Method for Recommender Systems. *JMLR: Workshop and Conference Proceedings*, 2012.

Kong, J., Teague, K., and Kessler, J. Just Count the Love-Hate Squares: A Rating Network Based Method for Recommendation Systems. *KDD Cup Workshop*, (San Diego, CA, 2011).

Education

Georgia Institute of Technology

Atlanta, GA

B.S., Electrical Engineering

August 2005 - December 2009
